

# AERO De-Ice Boots Care

## Application:

Suitable for all pneumatic de-ice boots. Not to be used on TKS surfaces and aircrafts with de-icing fluid systems.

Spray thinly and equally on the parts to be treated. Allow to act for 1-2 minutes. Wipe it off with a rag.

For first time application on highly weathered boots, it is recommended to repeat the process.

The fold-out spray head ensures precise spraying. If the spray tube remains folded in, large-area treatment is possible. Also sprays overhead.
