

AERO Cockpit Cleaning Rag

Application:

Suitable for cleaning sensitive glass, acrylic and all other surfaces of an aircraft.

Suitable for wet and dry cleaning.

The dry rag can be used with the **AERO Windshield Cleaner** for all aircraft windshields and to remove dust and grease from the sensitive glass cockpit and panels with anti-static effect.

For manual polishing with paint care products, e.g. **AERO Speed Wax / AERO Paint Restorer**, use the rag with circular movements and light pressure.

Use the wet rag to clean dirty surfaces. It is recommended to clean the rag regularly from removed dirt by rinsing it in clear, warm water.

Machine washable up to 95°C without using fabric softener. Only air drying.
